

# How to enter your API / Leverage / Lot Size in your customer portal

Enter your API keys into your customer portal by clicking the "API Configuration" tab on the left side of the customer portal. The API keys allow our trading system to connect to your Binance.com account to place and close trades.

## SPOT API

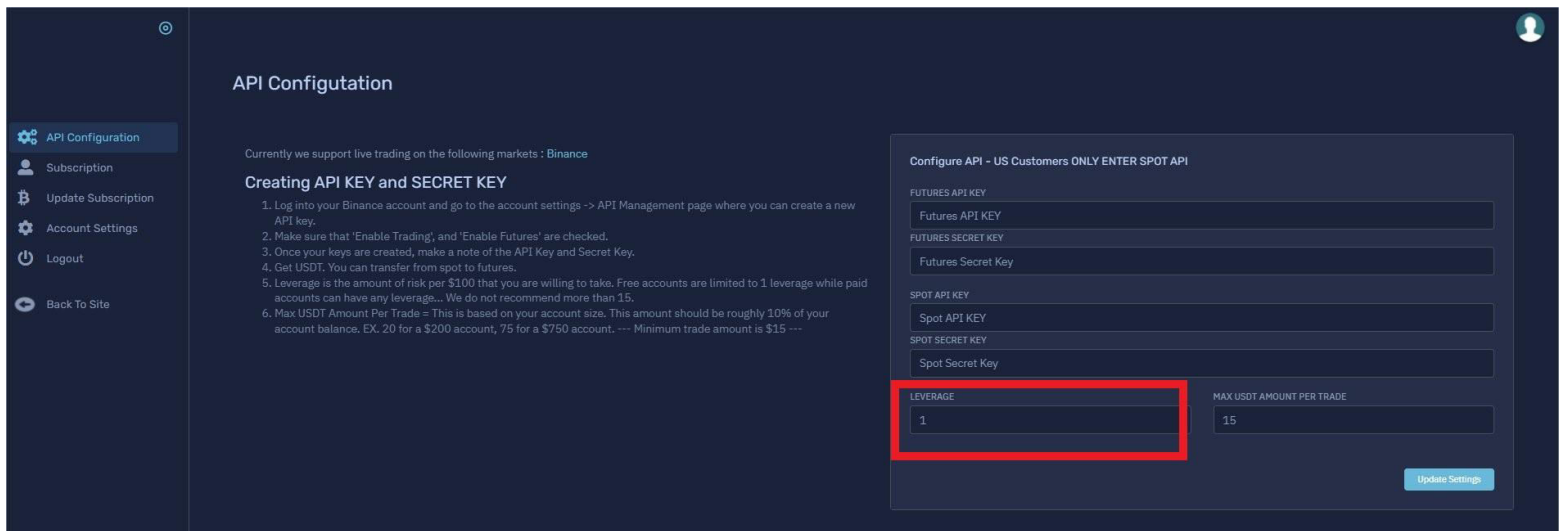

Because you are using a Spot trading account, please enter the API / Secret keys here...

The screenshot shows the "API Configuration" page. On the left is a navigation menu with "API Configuration" selected. The main content area has a heading "API Configuration" and a sub-heading "Creating API KEY and SECRET KEY". Below this is a list of six instructions for creating and using API keys. On the right is a form titled "Configure API - US Customers ONLY ENTER SPOT API". The form has fields for "FUTURES API KEY", "FUTURES SECRET KEY", "SPOT API KEY", and "SPOT SECRET KEY". The "SPOT API KEY" and "SPOT SECRET KEY" fields are highlighted with a red box. Below these are fields for "LEVERAGE" (set to 1) and "MAX USDT AMOUNT PER TRADE" (set to 15). An "Update Settings" button is at the bottom right.

## LEVERAGE

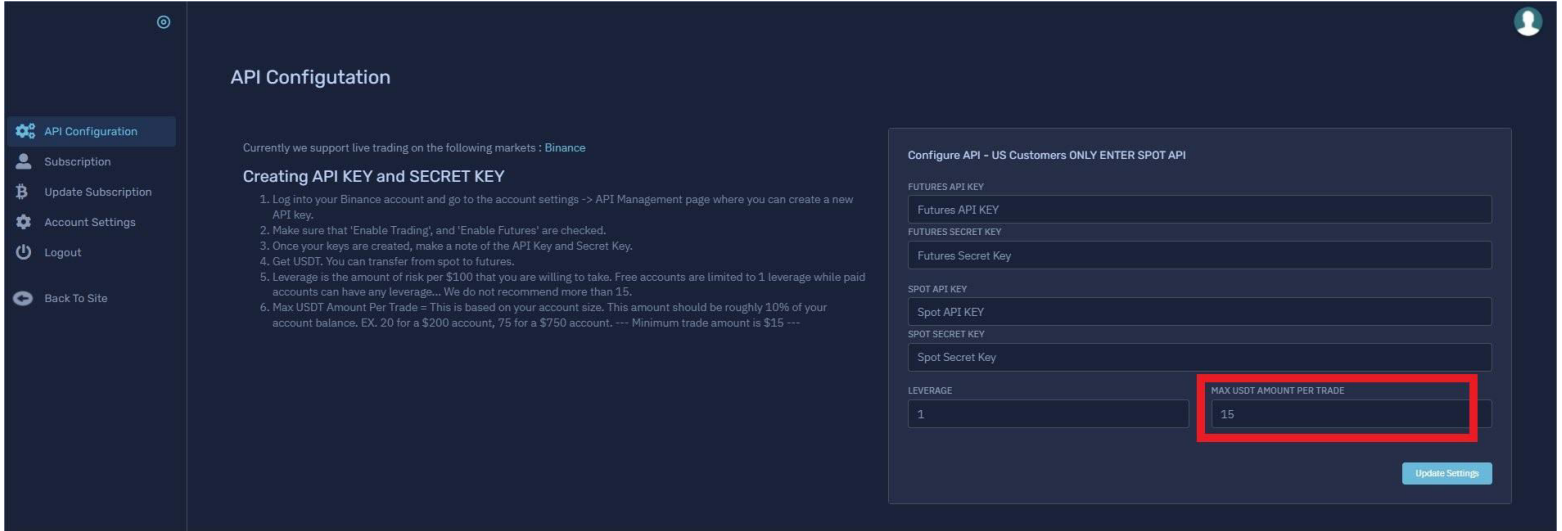

Next, you will need to select your risk tolerance... This is done by choosing your Leverage and Lot size. We recommend using LOW leverage as fees will be lower and the trades will be safer. A great rule of thumb is to run the system at a 1 Leverage and a lot size of 10% of your account balance. EXAMPLE → If you have a \$1000 account, your Leverage would be 1 and your Lot size would be \$100. For more risk/reward, you may want to increase the lot Leverage up to a recommended maximum of 5. Enter your Leverage here...

This screenshot is identical to the one above, showing the "API Configuration" page. In this view, the "LEVERAGE" field, which is currently set to "1", is highlighted with a red box. All other elements, including the navigation menu, instructions, and other form fields, remain the same.

# Lot Size

Now you will need to select the Lot Size that will be traded. The lot size is the USDT amount that will be traded. As stated earlier, the recommended trade amount is 10% of your account balance. There is a 15 USDT minimum to trade on the Binance.us platform.

The screenshot displays the 'API Configuration' page on a dark-themed interface. On the left, a sidebar menu includes 'API Configuration', 'Subscription', 'Update Subscription', 'Account Settings', 'Logout', and 'Back To Site'. The main content area is titled 'API Configuration' and contains a sub-section 'Creating API KEY and SECRET KEY' with a list of six numbered instructions. To the right, a 'Configure API - US Customers ONLY ENTER SPOT API' form is visible. This form includes input fields for 'FUTURES API KEY', 'FUTURES SECRET KEY', 'SPOT API KEY', and 'SPOT SECRET KEY'. Below these, there are dropdown menus for 'LEVERAGE' (set to 1) and 'MAX USDT AMOUNT PER TRADE' (set to 15). The 'MAX USDT AMOUNT PER TRADE' field is highlighted with a red rectangular border. An 'Update Settings' button is located at the bottom right of the form.
